

AUTOMATIC-TIE MOTE PRESS

C&M Baling Systems has developed the world's only fully automatic-tie horizontal cotton mote baling press. The CM3230-30-AT37 cotton mote baling press allows your gin to continually feed motes at high capacity and automatically wire ties a bale in 20-25 seconds WITHOUT OPERATOR ASSISTANCE (rather than two manual labor actions requiring 4-5 minutes on old style presses). C&M's dependable auto-tie system utilizes an independent 15HP hydraulic system mounted on the hydraulic tank and extrusion chamber. The 7" bore main compression ram is powered by a 30HP hydraulic power unit. The two hydraulic systems are electrically integrated and have a common PLC with touchscreen operator controls. Bales are 30" x 30" x 54-58" and weigh 550-650 lbs. Increase your mote bale throughput and lower your labor costs with the C&M Automatic-Tie Mote Press.

**HIGH CAPACITY MOTE BALE PRODUCTION + LABOR SAVINGS
JUST TAKE THE BALES AWAY!**
