

C+M BALING SYSTEMS

COTTON GIN TRASH BALING PRESS

Bale gin trash at your ginning rate with less per bale labor cost than baling motes.

Patent Pending

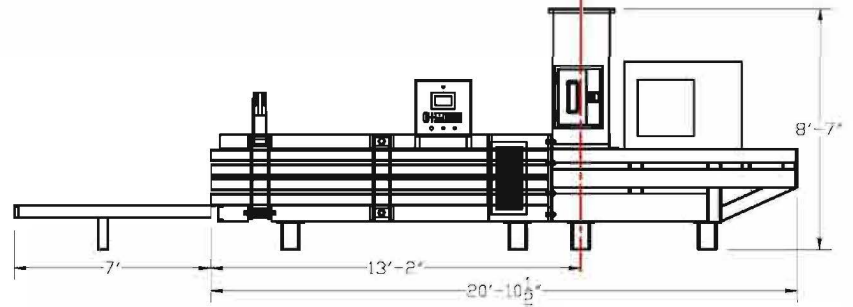

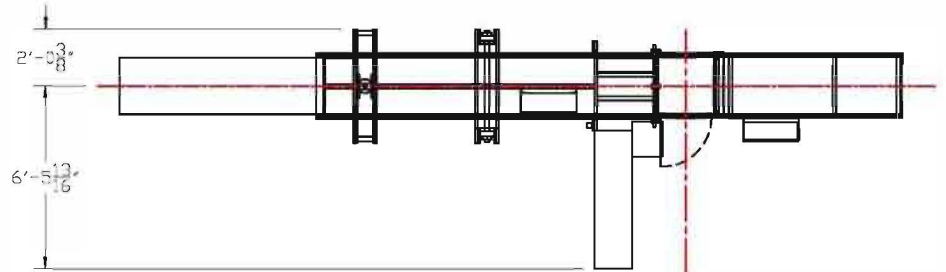

Gin trash can be a profitable byproduct of ginning seed cotton. But since the 1970's, when burning the gin trash was legislated virtually out of practice, gin trash has most often been a materials handling cost and burden to the ginning process, and NOT a marketable byproduct. The C&M Gin Trash Baling Press can convert your gin's biomass into a profitable byproduct.

“IF YOU BALE IT, THEY WILL COME.”

“I believe the primary reason profitable markets for gin trash have not developed is that gin trash has not been packaged efficiently and correctly. It sounds hokey, but “IF YOU BALE IT, THEY WILL COME.”

Raymond Adams

Requires less than two minutes of labor per bale!

Step 1 - Pull & Cut Straps

Step 2 - Connect Straps

Step 3 - Remove Bales

REPLACE GIN OPERATING COSTS WITH GIN REVENUE!
